LLA scaposa Sennen  
in Mach.-Laur.,  
Die Arten der  
G. *Biscutella* L.,  
Bot. Arch. Koenigs., 13: 1-2: 93  
(1926). Caulis sim-  
plex vel pauci-  
ramosus (4-5 dm. alt).  
Folia basiliaria 7-5  
x 2-1 cm., obovato-  
lanceolata, apice  
obtusiusculo, sinuato-  
dentata, dentibus  
obtusis approximat's  
utrinque 4-5, plus  
minusve dense his-  
pida. Folia caulina  
paucia minutissima,  
setaceo linearia, in-  
tegra vel leviter  
dentata. Pet 4 mm.  
Silicula 10-8 x 6-4  
mm. Habitat in ru-  
pestribus Pyrenaeo-  
rum. Hs., Ga.

29. BISCUTE-  
LLA strictifolia  
Pau in herz. Dif-  
fert a precedente fo-  
liis basilaribus an-  
gustis, dentibus acu-  
tis. Caulis ramosus  
vel simplex ad 6,4  
dm. altius. Habitat  
in montibus Hispaniae centralis.
