GRIMWOOD'S
CHELSEA NURSERY;
OR, A
CATALOGUE
OF
TREES, PLANTS, &c.
A CATALOGUE OF GREENHOUSE PLANTS, HARDY TREES AND SHRUBS, HERBACEOUS, BULBOUS-ROOTED, AND STOVE PLANTS, Arranged by their Latin Botanic Names, with an English Index referring to their Latin Names.

With a Collection of the most esteemed Varieties of FRUIT-TREES, AND SEEDS FOR The Kitchen-Garden, Flower-Garden, Flowering-Shrubs, Forest-Trees, And for Improving of Land.

SOLD BY DANIEL GRIMWOOD, NURSERYMAN, AT LITTLE CHELSEA, KENSINGTON.

LONDON: Catalogues to be had at GRIMWOOD and HUDSON's Seed-Shop, the Corner of ARLINGTON-STREET, PICCADILLY; J. SEWELL, Bookseller, CORNHILL; and at the NURSERY, LITTLE CHELSEA. MDCCCLXXXIII. (Price Two Shillings.)
THE Art of Gardening having received so much assistance from the Science of Botany, within these few years, especially by the distinguished and distinguishable labors of the eminent Linnaeus, has caused Gardening and Botany, in this enlightened age, to be so closely connected, that it is scarcely possible to separate them, in acquiring the names and knowledge of Plants.

In attempting to give a catalogue of Plants, it would therefore be deemed unpardonable, if they were not given in a scientific manner, as it would otherwise be impossible to ascertain the difference of many sorts. The method I have chosen is to arrange them by the botanic Latin names, and added the English after; but, for the convenience of Ladies and others, to whom the Latin name might not be quite so familiar, have added an Index in English with reference to the Latin names.

To accommodate the Nobility, Ladies and Gentlemen, who are curious in their Fruits, (not merely for the ornament of a desert, but for the more substantial pleasure of having them well-flavored) I have for many years been particularly attentive in selecting the most esteemed varieties, both at home and abroad, that they may have a regular succession for every month of the year; and particularly that they may be supplied with
P R E F A C E.

Such sorts as may be agreeable to their palate, have planted a tree of every kind, which can be procured to stand to produce Fruit, that they may have full demonstration of what they order.

From my pursuing this tedious and expensive method for sometime, I hope in another year or two, to give the public a DESCRIPTIVE CATALOGUE of the various Fruits, with their qualities, flavors, and time of ripening, which the uncertainty of the seasons in this climate make so difficult to ascertain, and frequently causes so much disappointment.

For the Seeds for the Kitchen-Garden, I have been careful in raising those varieties, which are remarkable for their size and flavor, and for their earliness in ripening; also the newest and most curious sorts for the Flower-Garden.

The Bulbous-rooted Flowers are not all included in this Catalogue; because, every year fresh varieties of Hyacinths, and other curious sorts are imported from Holland, France, Italy, and the Cape of Good-Hope, which are inserted in a separate Catalogue, printed annually.

A more numerous Catalogue of Plants could have been given, but I did not choose to insert too many, which it would not have been in my power to send when ordered.
